

Figure 1 is a scatter plot showing the evolution of the number of nodes in a network over 300 generations for six different network types (1-6). The y-axis represents the number of nodes (1-6) and the x-axis represents the generation index (1-300). Each row corresponds to a network type. Data points are shown as blue circles with error bars. The number of nodes generally remains constant over time, with some fluctuations. The number '55' is printed at the end of each row.
